

Starting Out With C++ Early Objects

NINTH EDITION

Tony Gaddis • Judy Walters • Godfrey Muganda

LOCATION OF VIDEONOTES IN THE TEXT Chapter 1 Designing a Program with Pseudocode, p. 54 Designing the Account Balance Program, p. 59 Predicting the Output of Problem 30, p. 59 Solving the Candy Bar Sales Problem, p. 60 **Chapter 2** Using cout to Display Output, p. 66 Assignment Statements, p. 93 Arithmetic Operators, p. 96 Solving the Restaurant Bill Problem, p. 108 **Chapter 3** Using cin to Read Input, p. 111 Evaluating Mathematical Expressions, p. 118 Combined Assignment Operators, p. 136 Solving the Stadium Seating Problem, p. 182 **Chapter 4** Using an if Statement, p. 195 Using an if/else Statement, p. 204 Using an if/else if Statement, p. 210 Using Logical Operators, p. 223 Solving the Time Calculator Problem, p. 272 **Chapter 5** The while Loop, p. 278 The for Loop, p. 305 Nested Loops, p. 313 Solving the Ocean Levels Problem, p. 351 **Chapter 6** Defining and Calling Functions, p. 358 Using Function Arguments, p. 367 Value-Returning Functions, p. 377 Solving the Markup Problem, p. 433 **Chapter 7** Creating a Class, p. 446 Creating and Using Class Objects, p. 448 Creating and Using Structures, p. 488 Solving the Car Class Problem, p. 534 **Chapter 8** Accessing Array Elements, p. 543 Passing an Array to a Function, p. 577 Two-Dimensional Arrays, p. 587 Solving the Chips and Salsa Problem, p. 627 **Chapter 9** Performing a Binary Search, p. 640 Sorting a Set of Data, p. 647 Solving the Lottery Winners Problem, p. 675

(continued on next page)

LO	CATION OF VIDEONOTES IN THE TEXT (continued)
Chapter 10	Pointer Variables, p. 681 Dynamically Allocating an Array, p. 705 Solving the Days in Current Month Problem, p. 736
Chapter 11	Operator Overloading, p. 764 Aggregation and Composition, p. 810 Overriding Base Class Functions, p. 831 Solving the Number of Days Worked Problem, p. 845
Chapter 12	Converting Strings to Numbers, p. 863 Writing a C-String Handling Function, p. 867 Solving the Case Manipulator Problem, p. 884
Chapter 13	The get Family of Member Functions, p. 903 Rewinding a File, p. 907 Solving the File Encryption Filter Problem, p. 946
Chapter 14	Recursive Binary Search, p. 961 QuickSort, p. 963 Solving the Recursive Multiplication Problem, p. 981
Chapter 15	Polymorphism, p. 989 Composition versus Inheritance, p. 1003 Solving the Sequence Sum Problem, p. 1019
Chapter 16	Throwing and Handling Exceptions, p. 1022 Writing a Function Template, p. 1034 Iterators, p. 1051 Solving the Arithmetic Exceptions Problem, p. 1068
Chapter 17	Adding an Element to a Linked List, p. 1079 Removing an Element from a Linked List, p. 1086 Solving the Member Insertion by Position Problem, p. 1117
Chapter 18	Storing Objects in an STL Stack, p. 1131 Storing Objects in an STL Queue, p. 1145 Solving the File Reverser Problem, p. 1157
Chapter 19	Inserting an Element into a Binary Tree, p. 1166 Removing an Element from a Binary Tree, p. 1170 Solving the Tree Size Problem, p. 1186

Preface 15

CHAPTER 1	Introduction to Computers and Programming 3	5
1.1	Why Program? 35	
1.2	Computer Systems: Hardware and Software 37	
1.3	Programs and Programming Languages 42	
1.4	What Is a Program Made of? 47	
1.5	Input, Processing, and Output 51	
1.6	The Programming Process 52	
1.7	Tying It All Together: Hi! It's Me 57	
CHAPTER 2	Introduction to C++ 61	
2.1	The Parts of a C++ Program 61	
2.2	The cout Object 65	
2.3	The #include Directive 70	
2.4	Variables and the Assignment Statement 71	
2.5	Literals 73	
2.6	Identifiers 75	
2.7	Integer Data Types 77	
2.8	Floating-Point Data Types 82	
2.9	The char Data Type 86	
2.10	The C++ string Class 90	
2.11	The bool Data Type 91	
2.12	Determining the Size of a Data Type 92	
2.13	More on Variable Assignments and Initialization 93	
2.14	Scope 95	
2.15	Arithmetic Operators 96	
2.16	Comments 100	
2.17	Programming Style 101	
2.18	Tying It All Together: Smile! 103	

Contents				
CHAPTER 3	Expressions and Interactivity 111			
3.1	The cin Object 111			
3.2	Mathematical Expressions 118			
3.3	Data Type Conversion and Type Casting 126			
3.4	Overflow and Underflow 132			
3.5	Named Constants 133			
3.6	Multiple and Combined Assignment 136			
3.7	Formatting Output 140			
3.8	Working with Characters and Strings 150			
3.9	More Mathematical Library Functions 164			
3.10	Random Numbers 166			
3.11	Focus on Debugging: Hand Tracing a Program 170			
3.12	,			
3.13	Tying It All Together: Word Game 175			
CHAPTER 4	Making Decisions 189			
4.1	Relational Operators 189			
4.2	The if Statement 195			
4.3	The if/else Statement 204			
4.4	The if/else if Statement 209			
4.5	Menu-Driven Programs 217			
4.6	Nested if Statements 219			
4.7	Logical Operators 223			
4.8	Validating User Input 232			
4.9	More about Blocks and Scope 234			
4.10	More about Characters and Strings 237			
4.11	The Conditional Operator 243			
4.12	The switch Statement 247			
4.13	Enumerated Data Types 256			
4.14	Focus on Testing and Debugging: Validating Output Results 259			
4.15	Green Fields Landscaping Case Study—Part 2 261			
4.16	Tying It All Together: Fortune Teller 266			
CHAPTER 5	Looping 277			
5.1	Introduction to Loops: The while Loop 277			
5.2	Using the while Loop for Input Validation 284			

- 5.3 The Increment and Decrement Operators 287

- Keeping a Running Total 294 5.5
- 5.6 Sentinels 297
- The do-while Loop 299 5.7

		Co
5.8	The for Loop 305	
5.9	Focus on Software Engineering: Deciding Which Loop to Use 311	
5.10	Nested Loops 313	
5.11	Breaking Out of a Loop 315	
5.12	Using Files for Data Storage 319	
5.13	Focus on Testing and Debugging: Creating Good Test Data 335	
5.14	Central Mountain Credit Union Case Study 338	
5.15	Tying It All Together: What a Colorful World 342	
CHAPTER 6	Functions 357	
6.1	Modular Programming 357	
6.2	Defining and Calling Functions 358	
6.3	Function Prototypes 366	
6.4	Sending Data into a Function 367	
6.5	Passing Data by Value 372	
6.6	The return Statement 376	
6.7	Returning a Value from a Function 377	
6.8	Returning a Boolean Value 383	
6.9	Using Functions in a Menu-Driven Program 385	
6.10	Local and Global Variables 389	
6.11	Static Local Variables 396	
6.12	Default Arguments 398	
6.13	Using Reference Variables as Parameters 402	
6.14	Overloading Functions 412	
6.15	The exit() Function 416	
6.16	Stubs and Drivers 419	
6.17	Little Lotto Case Study 421	
6.18	Tying It All Together: Glowing Jack-o-lantern 426	

CHAPTER 7 Introduction to Classes and Objects 441

- 7.1 Abstract Data Types 441
- 7.2 Object-Oriented Programming 443
- 7.3 Introduction to Classes 445
- 7.4 Creating and Using Objects 448
- 7.5 Defining Member Functions 450
- 7.6 Constructors 457
- 7.7 Destructors 463
- 7.8 Private Member Functions 466
- 7.9 Passing Objects to Functions 469
- 7.10 Object Composition 476
- 7.11 Focus on Software Engineering: Separating Class Specification, Implementation, and Client Code 480

7.12	Structures 487
7.13	More about Enumerated Data Types 499
7.14	Home Software Company OOP Case Study 503
7.15	Introduction to Object-Oriented Analysis and Design 510
7.16	Screen Control 520
7.17	Tying It All Together: Yoyo Animation 525
CHAPTER 8	Arrays 541
8.1	Arrays Hold Multiple Values 541
8.2	Accessing Array Elements 543
8.3	Inputting and Displaying Array Data 545
8.4	Array Initialization 552
8.5	The Range-Based for loop 559
8.6	Processing Array Contents 562
8.7	Using Parallel Arrays 573
8.8	The typedef Statement 577
8.9	Arrays as Function Arguments 577
8.10	Two-Dimensional Arrays 587
8.11	Arrays with Three or More Dimensions 594
8.12	Vectors 597
8.13	Arrays of Objects 609
8.14	National Commerce Bank Case Study 619
8.15	Tying It All Together: Rock, Paper, Scissors 621
CHAPTER 9	Searching, Sorting, and Algorithm Analysis 637
9.1	Introduction to Search Algorithms 637
9.2	Searching an Array of Objects 644
9.3	Introduction to Sorting Algorithms 647
9.4	Sorting an Array of Objects 655
9.5	Sorting and Searching Vectors 658
9.6	Introduction to Analysis of Algorithms 661
9.7	Case Studies 669
9.8	Tying It All Together: Secret Messages 669
CHAPTER 10	Pointers 679
10.1	Pointers and the Address Operator 679
10.2	Pointer Variables 681
10.3	The Relationship Between Arrays and
10.5	Pointers 685

	10.4	Pointer Arithmetic 689
	10.5	Initializing Pointers 690
	10.6	Comparing Pointers 693
	10.7	Pointers as Function Parameters 695
	10.8	Pointers to Constants and Constant Pointers 699
	10.9	Focus on Software Engineering: Dynamic Memory Allocation 704
	10.10	Focus on Software Engineering: Returning Pointers from Functions 708
	10.11	Pointers to Class Objects and Structures 714
	10.12	Focus on Software Engineering: Selecting Members of Objects 718
	10.13	Smart Pointers 720
	10.14	Tying It All Together: Pardon Me, Do You Have the Time? 728
СНАРТЕ	R 11	More about Classes and Object-Oriented Programming 737
	11.1	The this Pointer and Constant Member Functions 737
	11.2	Static Members 742
	11.3	Friends of Classes 749
	11.4	Memberwise Assignment 754
	11.5	Copy Constructors 755
	11.6	Operator Overloading 764
	11.7	Rvalue References and Move Operations 785
	11.8	Function Objects and Lambda Expressions 795
	11.9	Type Conversion Operators 804
	11.10	Convert Constructors 807
	11.11	Aggregation and Composition 810
	11.12	Inheritance 816
	11.13	Protected Members and Class Access 821
	11.14	Constructors, Destructors, and Inheritance 826
	11.15	Overriding Base Class Functions 831
	11.16	Tying It All Together: Putting Data on the World Wide Web 834
СНАРТЕ	R 12	More on C-Strings and the string Class 849
	12.1	C-Strings 849
	12.2	Library Functions for Working with C-Strings 854
	12.3	Conversions Between Numbers and Strings 863
	12.4	Writing Your Own C-String Handling Functions 867
	12.5	More about the C++ string Class 873
	12.6	Advanced Software Enterprises Case Study 876
	12.7	Tying It All Together: Program Execution Environments 878

Contents						
CHAPTER 13		Advanced File and I/O Operations 887				
	13.1	Input and Output Streams 887				
	13.2	More Detailed Error Testing 895

Appendix B: Operator Precedence and Associativity 1193

Appendix C: Answers to Checkpoints 1195

Appendix D: Answers to Odd-Numbered Review Questions 1235

Index 1255

Additional Appendices

The following appendices are located on the book's companion web site.

Appendix E: A Brief Introduction to Object-Oriented Programming

Appendix F: Using UML in Class Design
Appendix G: Multi-Source File Programs

Appendix H: Multiple and Virtual Inheritance

Appendix I: Header File and Library Function Reference

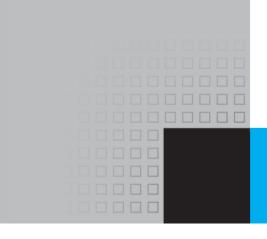

Appendix J: Namespaces

Appendix K: C++ Casts and Run-Time Type Identification

Appendix L: Passing Command Line Arguments

Appendix M: Binary Numbers and Bitwise Operations

Appendix N: Introduction to Flowcharting

Preface

Welcome to *Starting Out with C++: Early Objects*, 9th Edition. This book is intended for use in a two-term or three-term C++ programming sequence, or an accelerated one-term course. Students new to programming, as well as those with prior course work in other languages, will find this text beneficial. The fundamentals of programming are covered for the novice, while the details, pitfalls, and nuances of the C++ language are explored in-depth for both the beginner and more experienced student. The book is written with clear, easy-to-understand language and it covers all the necessary topics for an introductory programming course. This text is rich in example programs that are concise, practical, and real world oriented, ensuring that the student not only learns how to implement the features and constructs of C++, but why and when to use them.

What's New in the Ninth Edition

The New C++11 Standard

C++11 is the latest standard version of the C++ language. In previous years, while the standard was being developed, it was known as C++0x. In August 2011, it was approved by the International Standards Organization (ISO), and the name of the standard was officially changed to C++11. Most of the popular C++ compilers now support this standard.

The new C++11 standard was the primary motivation behind this edition, which introduces many of the new language features. However, a C++11 compiler is not strictly required to use the book. As you progress through the book, you will see C++11 icons in the margins, next to the new features that are introduced. Programs appearing in sections that are not marked with this icon will still compile using an older compiler.

The C++11 Topics Introduced in This Edition

• The auto key word is introduced in Chapter 2 as a way to simplify complex variable definitions. This key word causes the compiler to infer a variable's data type from its initialization value.

- Chapter 2 also introduces the new long long int and unsigned long long int data types and the LL literal suffix.
- Chapter 5 shows how to pass a string object directly to a file stream object's open member function, without the need to call the c_str() member function.
 A discussion of the c_str() function still exists for anyone using a legacy compiler.
- The range-based for loop is introduced in Chapter 7. This new looping mechanism automatically iterates over each element of an array, vector, or other collection, without the need for a counter variable or a subscript.
- Chapter 7 also introduces strongly typed enums.
- Chapter 8 introduces new ways to initialize variables and shows how a vector can now be initialized with an initialization list.
- Chapter 10 introduces smart pointers and provides examples of how and why to use the new unique_ptr and shared_ptr pointers for safely allocating and working with dynamic memory.
- Chapter 10 also introduces the move assignment operator, and the nullptr key word, which is now the standard way of representing a null pointer.
- Chapter 11 discusses move constructors, provides more in depth coverage of move assignment operators, and introduces lambda expressions.
- Chapter 12 introduces new functions in the C++11 string library and discusses the new overloaded to_string functions for converting numeric values to string objects.
- Chapter 15 introduces and demonstrates the use of the new override key word that helps prevent subtle overriding errors and the new final key word that prevents a virtual member function from being overridden.
- Chapter 16 introduces the new C++11 functions begin(c) and end(c) to specify positions within a collection c where an operation should begin and end.

What Else is New

This book's pedagogy and clear writing style remain the same as in the previous edition. However, in addition to updating the book to introduce the new C++11 standard, many improvements have been made to make it even more student-friendly.

• Updated Material

Material has been updated throughout the book to reflect changes in technology and in software development environments, as well as to improve clarity and incorporate best practices in teaching introductory programming. As a result, new graphics and new or redesigned figures have been added throughout the book where appropriate and new or improved sample programs have been included in a number of chapters.

New Material

New material has been added on a number of topics. In addition to introducing and using new C++11 features, this new edition includes new sections on literals, random numbers, and enumerated data types, as well as improved material on designing classes.

New Programming Challenges New Programming Challenge problems have been added to every chapter.

• Reorganized Chapters

Several chapters have been redesigned to improve student learning. Chapter 5 (Looping) has been reorganized to give students more practice using the while loop before introducing do-while and for loops. The Chapter 6 (Functions) material on defining and calling functions has been reorganized to introduce function prototypes earlier and allow main to always be the first function in a client program.

Organization of the Text

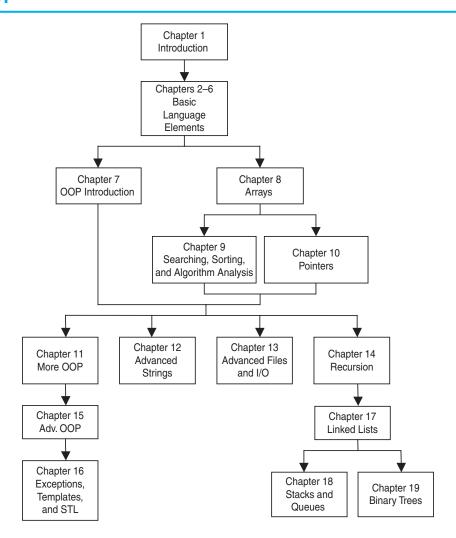

This text teaches C++ in a step-by-step fashion. Each chapter covers a major set of topics and builds knowledge as the student progresses through the book. Although the chapters can be easily taught in their existing sequence, flexibility is provided. The following dependency diagram (Figure P-1) suggests possible sequences of instruction.

Chapter 1 covers fundamental hardware, software, and programming concepts. The instructor may choose to skip this chapter if the class has already mastered those topics. Chapters 2 through 6 cover basic C++ syntax, data types, expressions, selection structures, repetition structures, and functions. Each of these chapters builds on the previous chapter and should be covered in the order presented.

Chapter 7 introduces object-oriented programming. It can be covered any time after Chapter 6, but before Chapter 11. Instructors who prefer to introduce arrays before classes can cover Chapter 8 before Chapter 7. In this case it is only necessary to postpone Section 8.13 (Arrays of Objects) until Chapter 7 has been covered.

As Figure P-1 illustrates, in the second half of the book Chapters 11, 12, 13, and 14 can be covered in any order. Chapters 11, 15, and 16, however, should be done in sequence. Instructors who wish to introduce data structures at an earlier point in the course, without having first covered advanced C++ and OOP features, can cover Chapter 17 (Linked Lists), followed by Chapters 18 and 19 (Stacks & Queues and Binary Trees), any time after Chapter 14 (Recursion). In this case it is necessary to simply omit the sections in Chapters 17–19 that deal with templates and the Standard Template Library.

Figure P-1

Brief Overview of Each Chapter

Chapter 1: Introduction to Computers and Programming

This chapter provides an introduction to the field of computer science and covers the fundamentals of hardware, software, operating systems, programming, problem solving, and software engineering. The components of programs, such as key words, variables, operators, and punctuation are covered. The tools of the trade, such as hierarchy charts and pseudocode, are also presented. The *Tying It All Together* section shows students how to use the cout statement to create a personalized output message. Programming Challenges at the end of the chapter help students see how the same basic input, processing, and output structure can be used to create multiple programs.

Chapter 2: Introduction to C++

This chapter gets the student started in C++ by introducing the basic parts of a C++ program, data types, the use of variables and literals, assignment statements, simple arithmetic operations, program output, and comments. The C++ string class is presented and string objects are used from this point on in the book as the primary method of handling strings. Programming style conventions are introduced, and good programming style is modeled here, as it is throughout the text. The *Tying It All Together* section lets the student play with simple text-based graphics.

Chapter 3: Expressions and Interactivity

In this chapter the student learns to write programs that input and handle numeric, character, and string data. The use of arithmetic operators and the creation of mathematical expressions are covered, with emphasis on operator precedence. Debugging is introduced, with a section on hand tracing a program. Sections are also included on using random numbers, on simple output formatting, on data type conversion and type casting, and on using library functions that work with numbers. The *Tying It All Together* section shows students how to create a simple interactive word game.

Chapter 4: Making Decisions

Here the student learns about relational expressions and how to control the flow of a program with if, if/else, and if/else if statements. Logical operators, the conditional operator, and the switch statement are also covered. Applications of these constructs, such as menu-driven programs, are illustrated. This chapter also introduces the concepts of blocks and scope and continues the theme of debugging with a section on validating output results. The *Tying It All Together* section uses random numbers and branching statements to create a fortune telling game.

Chapter 5: Looping

This chapter introduces, C++'s repetitive control mechanisms. The while loop, do-while loop, and for loop are presented, along with a variety of methods to control them. These include using counters, user input, end sentinels, and end-of-file testing. Applications utilizing loops, such as keeping a running total and performing data validation, are also covered. The chapter includes an extensive section on working with files and a section on creating good test data, continuing the book's emphasis on testing and debugging. The *Tying It All Together* section introduces students to Windows commands to create colorful output and uses a loop to create a multi-colored display.

Chapter 6: Functions

In this chapter the student learns how and why to modularize programs, using both void and value-returning functions. Parameter passing is covered, with emphasis on when arguments should be passed by value versus when they need to be passed by reference. Scope of variables is covered and sections are provided on local versus global variables and on static local variables. Overloaded functions are also introduced and demonstrated. The *Tying It All Together* section includes a modular, menu-driven program that emphasizes the versatility of functions, illustrating how their behavior can be controlled by the arguments sent to them.

Chapter 7: Introduction to Classes and Objects

In this chapter the text begins to focus on the object-oriented paradigm. Students have used provided C++ classes since the beginning of the text, but now they learn how to define their own classes and to create and use objects of these classes. Careful attention is paid to illustrating which functions belong in a class versus which functions belong in a client program that uses the class. Good object-oriented practices are discussed and modeled, such as protecting member data through carefully constructed accessor and mutator functions and hiding class implementation details from client programs. Once students are comfortable working with classes and objects, the chapter provides a brief introduction to the topic of object-oriented analysis and design. The chapter also includes a section on enumerated data types and a section on structures, which are used in the *Tying It All Together* section, where students learn to use screen control techniques to create a yoyo animation.

Chapter 8: Arrays

In this chapter the student learns to create and work with single and multidimensional arrays. Many examples of array processing are provided, including functions to compute the sum, average, highest and lowest values in an array. Students also learn to create tables using two-dimensional arrays, and to analyze array data by row or by column. Programming techniques using parallel arrays are also demonstrated, and the student is shown how to use a data file as an input source to populate an array. The range-based for loop is introduced as an easy way to iterate through all the elements of an array, and STL vectors are introduced and compared to arrays. A section on arrays of objects and structures is located at the end of the chapter, so it can be covered now or saved for later if the instructor wishes to cover this chapter before Chapter 7. The *Tying It All Together* section uses arrays to create a game of *Rock*, *Paper*, *Scissors* between a human player and the computer.

Chapter 9: Searching, Sorting, and Algorithm Analysis

Here the student learns the basics of searching for information stored in arrays and of sorting arrays, including arrays of objects. The chapter covers the Linear Search, Binary Search, Bubble Sort, and Selection Sort algorithms and has an optional section on sorting and searching STL vectors. A brief introduction to algorithm analysis is included, and students are shown how to determine which of two algorithms is more efficient. This chapter's *Tying It All Together* section uses both a table lookup and a searching algorithm to encode and decode secret messages.

Chapter 10: Pointers

This chapter explains how to use pointers. Topics include pointer arithmetic, initialization of pointers, comparison of pointers, pointers and arrays, pointers and functions, dynamic memory allocation, the new nullptr key word, and more. A new section introduces smart pointers and shows how they can be used to avoid memory leaks. The *Tying It All Together* section demonstrates the use of pointers to access library data structures and functions that return calendar and wall clock time.

Chapter 11: More About Classes and Object-Oriented Programming

This chapter continues the study of classes and object-oriented programming, covering more advanced topics such as inheritance and object aggregation and composition. Other topics include constant member functions, static members, friends, memberwise assignment, copy constructors, object type conversion operators, convert constructors, operator overloading, move constructors, and move assignment operators. A new section introduces function objects and the C++11 lambda expressions. The *Tying It All Together* section brings together the concepts of inheritance and convert constructors to build a program that formats the contents of an array to form an HTML table for display on a Web site.

Chapter 12: More on C-Strings and the string Class

This chapter covers standard library functions for working with characters and C-strings, as well as material on string class functions, functions in the new C++11 string library, and new overloaded to_string functions for converting numeric values to string objects. The *Tying It All Together* section shows students how to access string-based program environments to obtain information about the computer and the network on which the program is running.

Chapter 13: Advanced File and I/O Operations

This chapter introduces more advanced topics for working with sequential access text files and introduces random access and binary files. Various modes for opening files are discussed, as well as the many methods for reading and writing their contents. The *Tying It All Together* program applies many of the techniques covered in the chapter to merge two text files into an HTML document for display on the Web, with different colors used to illustrate which file each piece of data came from.

Chapter 14: Recursion

In this chapter recursion is defined and demonstrated. A visual trace of recursive calls is provided, and recursive applications are discussed. Many recursive algorithms are presented, including recursive functions for computing factorials, finding a greatest common denominator (GCD), performing a binary search, sorting using QuickSort, and solving the famous Towers of Hanoi problem. For students who need more challenge, there is a section on exhaustive and enumeration algorithms. The *Tying It All Together* section uses recursion to evaluate prefix expressions.

Chapter 15: Polymorphism and Virtual Functions

The study of classes and object-oriented programming continues in this chapter with the introduction of more advanced concepts such as polymorphism and virtual functions. Information is also presented on abstract base classes, pure virtual functions, type compatibility within an inheritance hierarchy, and virtual inheritance. The *Tying It All Together* section illustrates the use of inheritance and polymorphism to display and animate graphical images.

Chapter 16: Exceptions, Templates, and the Standard Template Library (STL)

Here the student learns to develop enhanced error trapping techniques using exceptions. Discussion then turns to using function and class templates to create generic code. Finally, the student is introduced to the containers, iterators, and algorithms offered by the Standard Template Library (STL). The *Tying It All Together* section uses various containers in the Standard Template Library to create an educational children's game.

Chapter 17: Linked Lists

This chapter introduces concepts and techniques needed to work with lists. A linked list ADT is developed, and the student learns how to create and destroy a list, as well as to write functions to insert, append, and delete nodes, to traverse the list, and to search for a specific node. A linked list class template is also demonstrated. The *Tying It All Together* section brings together many of the most important concepts of OOP by using objects, inheritance, and polymorphism in conjunction with the STL list class to animate a collection of images.

Chapter 18: Stacks and Queues

In this chapter the student learns to create and use static and dynamic stacks and queues. The operations of stacks and queues are defined, and templates for each ADT are demonstrated. The static array-based stack uses exception-handling to handle stack overflow and underflow, providing a realistic and natural example of defining, throwing, and catching exceptions. The *Tying It All Together* section discusses strategies for evaluating postfix expressions and uses a stack to convert a postfix expression to infix.

Chapter 19: Binary Trees

This chapter covers the binary tree ADT and demonstrates many binary tree operations. The student learns to traverse a tree, insert, delete, and replace elements, search for a particular element, and destroy a tree. The *Tying It All Together* section introduces a tree structure versatile enough to create genealogy trees.

Appendices in the Book

Appendix A: The ASCII Character Set A list of the ASCII and extended ASCII characters and their codes.

Appendix B: Operator Precedence and Associativity A list of the C++ operators with their precedence and associativity.

Appendix C: Answers to Checkpoints A tool students can use to assess their understanding by comparing their answers to the Checkpoint exercises found throughout the book. The answers to all Checkpoint exercises are included.

Appendix D: Answers to Odd-Numbered Review Questions Another tool students can use to gauge their understanding and progress.

Additional Appendices on the Book's Companion Website

Appendix E: A Brief Introduction to Object-Oriented Programming An introduction to the concepts and terminology of object-oriented programming.

Appendix F: Using UML in Class Design A brief introduction to the Unified Modeling Language (UML) class diagrams with examples of their use.

Appendix G: Multi-Source File Programs A tutorial on how to create, compile, and link programs with multiple source files. Includes the use of function header files, class specification files, and class implementation files.

Appendix H: Multiple and Virtual Inheritance A self-contained discussion of the C++ concepts of multiple and virtual inheritance for anyone already familiar with single inheritance.

Appendix I: Header File and Library Function Reference A reference for the C++ library functions and header files used in the book.

Appendix J: Namespaces An explanation of namespaces and their purpose, with examples provided on how to define a namespace and access its members.

Appendix K: C++ Casts and Run-Time Type Identification An introduction to different ways of doing type casting in C++ and to run-time type identification.

Appendix L: Passing Command Line Arguments An introduction to writing C++ programs that accept command-line arguments. This appendix will be useful to students working in a command-line environment, such as UNIX or Linux.

Appendix M: Binary Numbers and Bitwise Operations A guide to the binary number system and the C++ bitwise operators, as well as a tutorial on the internal storage of integers.

Appendix N: Introduction to Flowcharting A tutorial that introduces flowcharting and its symbols. It includes handling sequence, selection, case, repetition, and calls to other modules. Sample flowcharts for several of the book's example programs are presented.

Features of the Text

Concept Statements Each major section of the text starts with a concept statement.

This statement summarizes the key idea of the section.

Example Programs The text has over 350 complete example programs, each

designed to highlight the topic currently being studied. In most cases, these are practical, real-world examples. Source code for these programs is provided so that students can run

the programs themselves.

Program Output After each example program there is a sample of its screen

output. This immediately shows the student how the program

should function.

Tying It All Together This special section, found at the end of every chapter, shows

the student how to do something clever and fun with the

material covered in that chapter.

VideoNotes

A series of online videos, developed specifically for this book, are available for viewing at www.pearsonglobaleditions. com/gaddis. VideoNote icons appear throughout the text,

alerting the student to videos about specific topics.

Checkpoints Checkpoints are questions placed throughout each chapter as a selftest study aid. Answers for all Checkpoint questions are

provided in Appendix C at the back of the book so students can check how well they have learned a new topic.

Notes appear at appropriate places throughout the text. They

are short explanations of interesting or often misunderstood

points relevant to the topic at hand.

Warnings caution the student about certain C++ features, programming techniques, or practices that can lead to

malfunctioning programs or lost data.

Case Studies

Case studies that simulate real-world applications appear in many chapters throughout the text, with complete code provided for each one. Additional case studies are provided on the book's

companion website. These case studies are designed to highlight

the major topics of the chapter in which they appear.

Review Questions Each chapter presents a thorough and diverse set of review questions, such as fill-in-the-blank and short answer, that

Notes

Warnings

questions, such as fill-in-the-blank and short answer, that check the student's mastery of the basic material presented in the chapter. These are followed by exercises requiring problem solving and analysis, such as the *Algorithm Workbench*, *Predict the Output*, and *Find the Errors* sections. Each chapter ends with a *Soft Skills* exercise that focuses on communication and group process skills. Answers to the odd numbered review questions and review exercises are provided in Appendix D at

the back of the book.

Programming Challenges

Each chapter offers a pool of programming exercises designed to solidify the student's knowledge of the topics currently being studied. In most cases the assignments present

real-world problems to be solved.

Group Projects

There are several group programming projects throughout the text, intended to be constructed by a team of students. One student might build the program's user interface, while another student writes the mathematical code, and another designs and implements a class the program uses. This process is similar to the way many professional programs are written and encourages teamwork within the classroom.

C++ Quick Reference Guide For easy access, a quick reference guide to the C++ language is printed on the inside back cover.

Supplements

Student Resources

The following items are available on the Gaddis Series resource page at www.pearsonglobaleditions.com/gaddis:

- Complete source code for every program included in the book
- Additional case studies, complete with source code
- A full set of appendices (including several tutorials) that accompany the book
- Access to the book's companion VideoNotes
- Links to download numerous programming environments and IDEs, including Visual Studio Community Edition.

Instructor Resources

The following supplements are available to qualified instructors only.

- Answers to all Review Questions in the text
- Solutions for all Programming Challenges in the text
- PowerPoint presentation slides for every chapter
- A computerized test bank
- A collection of lab materials
- Source code files

Visit the Pearson Education Instructor Resource Center (http://www.pearsonglobaleditions.com/gaddis) for information on how to access them.

Practice and Assessment with MyProgrammingLab

MyProgrammingLab helps students fully grasp the logic, semantics, and syntax of programming. Through practice exercises and immediate, personalized feedback, MyProgrammingLab improves the programming competence of beginning students who often struggle with the basic concepts and paradigms of popular high-level programming languages. A self-study and homework tool, MyProgrammingLab consists of hundreds of small practice exercises organized around the structure of this

textbook. For students, the system automatically detects errors in the logic and syntax of their code submissions and offers targeted hints that help them figure out what went wrong. For instructors, a comprehensive gradebook tracks correct and incorrect answers and stores the code input by students for review.

MyProgrammingLab is offered to users of this book in partnership with Turing's Craft, the makers of the CodeLab interactive programming exercise system. For a full demonstration, to see feedback from instructors and students, or to get started using MyProgrammingLab in your course, visit www.myprogramminglab.com.

Which Gaddis C++ book is right for you?

The *Starting Out with C++* Series includes three books, one of which is sure to fit your course:

- Starting Out with C++: Early Objects
- Starting Out with C++: From Control Structures through Objects
- Starting Out with C++: Brief Version

Acknowledgments

There have been many helping hands in the development and publication of this text. We would like to thank the following faculty reviewers for their helpful suggestions and expertise.

The authors would like to thank their students at Haywood Community College and North Central College for inspiring them to write student-friendly books. They would also like to thank their families for their tremendous support throughout this project. An especially big thanks goes to our terrific editorial, production, and marketing team at Pearson. In particular we want to thank our editor Matt Goldstein and our production program manager Carole Snyder, who have been instrumental in guiding the production of this book. We also want to thank our project manager, Rose Kernan, who helped everything run smoothly, and our meticulous and knowledgable copyeditor, Shelly Gerger-Knechtl, who dedicated many hours to making this book the best book it could be. You are great people to work with!

About the Authors

Tony Gaddis is the principal author of the *Starting Out With* series of textbooks. He is a highly acclaimed instructor with two decades of experience teaching computer science courses, primarily at Haywood Community College. Tony was previously selected as the North Carolina Community College "Teacher of the Year" and has received the Teaching Excellence award from the National Institute for Staff and Organizational Development. The *Starting Out With* series includes introductory textbooks covering Programming Logic and Design, C++, JavaTM, Microsoft[®] Visual Basic[®], Microsoft[®] C#, Python, App Inventor, and Alice, all published by Pearson.

Judy Walters is an Associate Professor of Computer Science at North Central College in Naperville, Illinois, where she teaches courses in both Computer Science and Media Studies. She is also very involved with International Programs at her college and has spent three semesters teaching in Costa Rica, where she hopes to retire some day.

Godfrey Muganda is a Professor of Computer Science at North Central College. He teaches a wide variety of courses at both the undergraduate and graduate levels, including courses in Algorithms, Computer Organization, Web Applications, and Web Services.
