TECHNOLOGY in Action

Premium Media Site Access Code

Improve your grade with hands-on tools and resources!

You can access the following Premium Resources using your Access Code. Register now to get the most out of *Technology in Action!*

- Practice what you learn with interactive Active Helpdesk Calls*
- Use the Sound Byte lessons to practice your skills*
- Experience real-world computer situations with Simulations*
- *Check Your Understanding* section
- *Replay* videos from the authors provide a video review of each chapter Part in an easy-to-use format you can use on your phones, tablets, or computers!*

*Access code required for these premium resources

Your Access Code is:

Note: If there is no silver foil covering the access code, it may already have been redeemed, and therefore may no longer be valid. In that case, you can purchase online access using a major credit card or PayPal account. To do so, go to www.pearsonglobaleditions.com/Evans, select your book cover, click on "Buy Access" and follow the on-screen instructions.

To Register:

- To Start you will need a valid email address and this access code.
- Go to www.pearsonglobaleditions.com/Evans and scroll to find your text book.
- Once you've selected your text, on the Home Page, click the link to access the Student Premium Content.
- Click the Register button and follow the on-screen instructions.
- After you register, you can sign in any time via the log-in area on the same screen.

System Requirements

Windows 7 Ultimate Edition; IE 8
Windows Vista Ultimate Edition SP1; IE 8
Windows XP Professional SP3; IE 7
Windows XP Professional SP3; Firefox 3.6.4
Mac OS 10.5.7; Firefox 3.6.4
Mac OS 10.6; Safari 5

Contents

Chapter 1

Using Technology to Change the World 32

How Will You Put Technology in Action? 34

Technology on the World Stage 34

Political Issues 34

Other Global Issues 35

ETHICS in IT: The Digital Divide and the Mobile Bridge 37

Technology and Our Society 38

Technology Impacts How We Think 38

Technology Impacts How We Connect 38

Technology Impacts How We Consume 39

TRY THIS: Skyping Around the World 42

How Will Technology Improve Your Life? 44

Technology at Home 44

Technology and Your Career 46

Retail: Working in a Data Mine 46

Arts: Ink, Paints, and a Laptop? 46

Education: Teaching and Learning 47

Law Enforcement: Put Down That Mouse—You’re Under Arrest! 49

Medicine: The Chip Within 49

DIG DEEPER: Making Reality Even More Real 50

Science: Simulating Reality 51

Psychology: Computerized Coach 51

Chapter 2

Looking at Computers: Understanding the Parts 58

Understanding Digital Components 60

Understanding Your Computer 60

Computers Are Data Processing Devices 60

Bits and Bytes: The Language of Computers 61

Types of Computers 61

Input Devices 65

Keyboards 65

Mice and Other Pointing Devices 67

Image Input 69

DIG DEEPER: How Touch Screens Work 70

Sound Input 70

ETHICS in IT: What Is Ethical Computing? 72

Output Devices	73
Monitors.....	73
Printers.....	76
Sound Output	77
TRY THIS: What's Inside My Computer?.....	80
Processing, Storage, and Connectivity	82
Processing and Memory on the Motherboard	82
Memory.....	83
Processing	83
Storing Data and Information	84
Hard Drives	84
Cloud Storage.....	84
Portable Storage Options	84
Optical Storage	86
Connecting Peripherals to the Computer	87
High-Speed and Data Transfer Ports	87
Connectivity and Multimedia Ports.....	87
Adding Ports: Expansion Cards and Hubs.....	88
Power Controls	89
Setting It All Up	91
TRENDS in IT: Innovations in Printing.....	94

Chapter 3

Using the Internet: Making the Most of the Web's Resources.....	104
Working and Playing on the Web.....	106
The Internet and How It Works	106
The Origin of the Internet.....	106
How the Internet Works.....	107
Communicating and Collaborating on the Web.....	109
Social Networking	109
E-Mail.....	109
Instant Messaging	111
Wikis	111
Blogs.....	113
Podcasts and Webcasts.....	113
Web Entertainment.....	115

Dedication

For my wife, Patricia, whose patience, understanding, and support continue to make this work possible . . . especially when I stay up past midnight writing! And to my parents, Jackie and Dean, who taught me the best way to achieve your goals is to constantly strive to improve yourself through education.

Alan Evans

For all the teachers, mentors, and gurus who have popped in and out of my life.

Kendall Martin

For my husband, Ted, who unselfishly continues to take on more than his fair share to support me throughout this process, and for my children, Laura, Carolyn, and Teddy, whose encouragement and love have been inspiring.

Mary Anne Poatsy

What's New

Technology in Action, 11th Edition

We are delighted for you to explore the Eleventh Edition of *Technology in Action*!

*Explore, discover, and experience technology with the immersive and adaptive **Technology in Action**—the book that uses technology to teach technology!*

Technology in Action is a learning system that pushes the envelope of what is possible in technology, and what is helpful in teaching. It is a system that fits the way students are learning today and uses rich companion media to engage students in and out of the classroom while providing essential training on computer concepts.

What's New

- All content has been updated as needed to ensure coverage of the most current technology and end-of-chapter exercises have been updated throughout the book.

COMPLETELY UPDATED AND ENHANCED media offerings including:

- **Sound Bytes:** These multimedia lessons help demystify computer concepts with audio and video presentations. All of the Sound Bytes have been updated to provide timely and accurate information.
- **Active Helpdesk Calls:** These highly interactive, engaging activities provide students with a realistic experience of how help is delivered via phone, live chat, FAQ searches, and so on. Students play the role of the staff answering technology questions using these various approaches.
 - A virtual supervisor provides support to the student throughout calls.
 - Assessment questions after each call provide instructors with a tool to gauge and track students' progress.

All chapters chapters have been updated with new images, current topics, and state-of-the art technology coverage. Some of the chapter changes are listed here:

Chapter 1: Using Technology to Change the World

- Throughout the chapter, text, figures, and photos have been updated.

Chapter 2: Looking at Computers: Understanding the Parts

- Throughout the chapter, text, figures, and photos have been updated.
- Gesture technology is now covered in the “How Cool Is This?” feature.
- The Keyboard section has been redesigned to reflect the shift from physical keyboards to touch screens.
- Enhanced coverage of transparent OLED displays has been added.
- Coverage of cloud storage solutions has been augmented to reflect student needs and trends.
- The “Try This: What's Inside My Computer?” activity has been updated to reflect Windows 8.1 changes.

Chapter 3: Using the Internet: Making the Most of the Web's Resources

- Throughout the chapter, text, figures, and photos have been updated.
- NEW “How Cool Is This?” feature has been added on the Screenleap.com screen sharing app.
- NEW Bits & Bytes on HTML5 vs Flash, Maxthon, and Outlook.com.
- Streaming audio and streaming video have been condensed to discuss streaming media in general.

Technology in Focus: The History of the PC

- This Tech in Focus has been updated throughout.

Chapter 4: Application Software: Programs That Let You Work and Play

- Throughout the chapter, text, figures, and photos have been updated.
- NEW “How Cool Is This?” feature has been added on eye-tracking software.
- “Trends in IT: Mobile Commerce: What Have You Bought with Your Phone Lately?” has been updated.

- All screen images of Microsoft Office applications have been updated to Office 2013; and discussion of new features of Office 2013 have been included in the text.
- “Bits & Bytes: Alternatives to PowerPoint” has been revised to include additional alternatives.
- NEW “Bits & Bytes: Mirror, Mirror . . .” has been added, replacing PDF Bits & Bytes on video file formats for portable media players from the previous edition.
- Media Management Software has been removed, with important pieces of the information mentioned in other places in the chapter.

Chapter 5: System Software: The Operating System, Utility Programs, and File Management

- Throughout the chapter, text, figures, and photos have been updated.
- Content throughout has been updated to include coverage of Windows 8.1 and OS X Mavericks.
- NEW “How Cool Is This?” feature has been added on Google Chrome syncing.
- NEW Ethics in IT feature has been added—“The Great Debate: Is Mac OS X Safer than Windows?”
- NEW “Try This: Organizing Tiles on the Start Screen in Windows 8” activity has been added.
- “The Windows Interface” section has been revised and updated to reflect changes in Windows 8.1.
- NEW “Bits & Bytes: Save Files to the Cloud Right from Your Apps” has been added.

Technology in Focus: Information Technology Ethics

- This Tech in Focus has been updated throughout.
- The “Using Computers to Support Ethical Conduct” section has been updated to cover Google Crisis Response.

Chapter 6: Understanding and Assessing Hardware: Evaluating Your System

- Throughout the chapter, text has been updated to match current hardware standards, and figures and photos have been updated.
- NEW “How Cool Is This?” feature has been added on the Arduino microcontroller project.
- NEW “Bits & Bytes: The Haswell Boost” has been added replacing the “Bits and Bytes: Not Much Power at All.”

- All references to operating system utilities have been updated to reflect changes in Windows 8.1.
- Summary table figures have been redesigned for increased clarity.
- Emphasis has been shifted from desktop computers toward mobile devices.

Chapter 7: Networking: Connecting Computing Devices

- Throughout the chapter, text, figures, and photos have been updated.
- NEW “How Cool Is This?” feature has been added on Karma WiFi.
- A new “Bits & Bytes: Mesh Networks—An Emerging Alternative” has been added, replacing “Wake Up Your Mac Remotely.”
- NEW Bits & Bytes: “Connecting to Wireless Networks on the Road? Beware of ‘Evil Twins!’” moved to this chapter from Chapter 9, and replaces “Blazingly Fast Wireless Connections on the Horizon.”
- The content from the removed “Bits & Bytes: Blazingly Fast Wireless Connections on the Horizon” has been incorporated into the chapter content.

Technology in Focus: Under the Hood

- This Tech in Focus has been updated throughout, with many new photos.
- The “Bits and Bytes: Today’s Supercomputers: The Fastest of the Fast” has been updated to reflect the newest supercomputers.
- NEW “Bits and Bytes: Forget CPUs: SoC Is the Future for Mobile Devices!” has been added.

Chapter 8: Digital Devices and Media: Managing a Digital Lifestyle

- Throughout the chapter, text, figures, and photos have been updated.
- NEW “How Cool Is This?” feature has been added on 3D printing.
- NEW “Bits & Bytes: Talking to Yourself” has been added.
- NEW “Bits & Bytes: Want to Read That Voicemail?” has been added, replacing Bits & Bytes on Billshrink.
- NEW “Bits & Bytes: The Fabulous Phablet” has been added.

Chapter 9: Securing Your System: Protecting Your Digital Data and Devices

- Throughout the chapter, text, figures, and photos have been updated.
- Screenshots throughout have been updated to reflect Windows 8.1.
- NEW “Bits & Bytes: I Received a Data Breach Letter . . . Now What?” has been added.
- The Biometric Authentication Devices section has been updated for the new iPhone 5 features.
- NEW “Bits & Bytes: Can’t Remember Passwords? Try a Passphrase Instead!” has been added.

Technology in Focus: Careers in IT

- This Tech in Focus has been updated throughout.

Chapter 10: Behind the Scenes: Software Programming

- Throughout the chapter, text, figures, and photos have been updated.
- NEW “How Cool Is This?” feature has been added on the Open Data initiatives of major cities.
- NEW “Bits and Bytes: Competitive Coding” detailing collegiate and civic hackathons has been added, replacing “Bits and Bytes: My Algorithm Can Beat Your Algorithm.”
- NEW “Bits & Bytes: Coding for Zombies” has been added, featuring Rails for Zombies from Code Academy.
- NEW “Bits & Bytes: The Best Résumé” has been added, replacing “Bits & Bytes: Want to Learn? Work for Free,” and details the use of gitHub as a resume component.

Chapter 11: Behind the Scenes: Databases and Information Systems

- Throughout the chapter, text has been updated, and figures, screenshots, and photos have been updated to reflect changes in Microsoft Access 2013.
- NEW “How Cool Is This?” feature has been added on the DrawAFriend app.
- “Ethics in IT: Data, Data Everywhere—But Is It Protected?” section has been updated with a new example.

Chapter 12: Behind the Scenes: Networking and Security in the Business World

- Throughout the chapter, text, figures, and photos have been updated.
- NEW “How Cool Is This?” feature has been added on secure social collaboration tools.
- NEW “Bits & Bytes: Go Green with Mobile Apps” has been added.
- NEW “Bits & Bytes: US Military Brings Its Own Network . . . By Plane!” has been added.

Chapter 13: Behind the Scenes: How the Internet Works

- Throughout the chapter, text, figures, and photos have been updated.
- NEW “Bits & Bytes: Server in the Cloud” has been added, highlighting Google App Engine.
- The “Bits & Bytes: Gmail Features You Should Know About” has been updated.
- NEW “How Cool Is This?” feature on MOOC courses for learning has been added.

About the Authors

Alan Evans, MS, CPA
aevans@mc3.edu

Alan is currently a faculty member at Moore College of Art and Design and Montgomery County Community College, teaching a variety of computer science and business courses. He holds a BS in accounting from Rider University and an MS in information systems from Drexel University, and he is a certified public accountant. After a successful career in business, Alan finally realized that his true calling is education. He has been teaching at the college level since 2000. Alan enjoys giving presentations at technical conferences and meets regularly with faculty and administrators from other colleges to discuss curriculum development and new methods of engaging students.

Kendall Martin, PhD
kmartin@mc3.edu

Kendall is an Associate Professor at Montgomery County Community College with teaching experience at both the undergraduate and graduate levels at a number of institutions, including Villanova University, DeSales University, Ursinus College, and Arcadia University. Kendall's education includes a BS in electrical engineering from the University of Rochester and an MS and a PhD in engineering from the University of Pennsylvania. She has industrial experience in research and development environments (AT&T Bell Laboratories), as well as experience with several start-up technology firms.

Mary Anne Poatsy, MBA
mpoatsy@mc3.edu

Mary Anne is a senior faculty member at Montgomery County Community College, teaching various computer application and concepts courses in face-to-face and online environments. She enjoys speaking at various professional conferences about innovative classroom strategies. She holds a BA in psychology and education from Mount Holyoke College and an MBA in finance from Northwestern University's Kellogg Graduate School of Management. Mary Anne has been in teaching since 1997, ranging from elementary and secondary education to Montgomery County Community College, Gwynedd-Mercy College, Muhlenberg College, and Bucks County Community College, as well as training in the professional environment. Before teaching, she was a vice president at Shearson Lehman Hutton in the Municipal Bond Investment Banking Department.

Acknowledgments

First, we would like to thank our students. We constantly learn from them while teaching, and they are a continual source of inspiration and new ideas.

We could not have written this book without the loving support of our families. Our spouses and children made sacrifices (mostly in time not spent with us) to permit us to make this dream into a reality.

Although working with the entire team at Pearson has been a truly enjoyable experience, a few individuals deserve special mention. The constant support and encouragement we receive from Jenifer Niles, Executive Acquisitions Editor, and Michael Payne, Editor in Chief, continually make this book grow and change. Our heartfelt thanks go to Shannon LeMay-Finn, our Developmental Editor. Her creativity, drive, and management skills helped make this book a reality. We also would like to extend our appreciation to Rhonda Aversa, our Editorial and Production Project Manager, who works tirelessly to ensure that our book is published on time and looks fabulous. The timelines are always short, the art is complex, and there are many people with whom she has to coordinate tasks. But she makes it look easy!

There are many people whom we do not meet in person at Pearson and elsewhere who make significant contributions by designing the book, illustrating, composing the pages, producing multimedia, and securing permissions. We thank them all. We would also like to thank the supplement authors for this edition: Wanda Gibson, Julie Boyles, Terri Holly, Stephanie Emrich, Doug Courter, Lori Damanti, Tony Nowakowski, Sara Buscaino, Sharon Behrens, Sue McCrory, Linda Pogue, and Stacy Everly.

And finally, we would like to thank the reviewers and the many others who contribute their time, ideas, and talents to this project. We appreciate their time and energy, as their comments help us turn out a better product each edition.

Pearson would like to thank and acknowledge S.H. Chung (Wawasan Open University) for his contribution to the Global Edition, and Arup Bhattacharjee (RCC Institute of Technology), Soumen Mukherjee (RCC Institute of Technology) and Shaligram Prajapat (Devi Ahilya University) for reviewing the Global Edition.

11th Edition Reviewers

Pearson and the authors would like to thank the following people for their help and time in making this book what it is. We couldn't publish this book without their contributions.

Letter from the Authors

Our 11th Edition—A Letter from the Authors

Why We Wrote This Book

The pace of technological change is ever increasing. In education, we have seen this impact us more than ever in the past year—MOOCs, touch-screen mobile delivery, and Hangouts are now fixed parts of our environment.

Even the most agile of learners and educators need support in keeping up with this pace of change. In the 11th edition of *Technology in Action*, we have responded with mobile device media, interactive ebook technology, and updated video

supports. We continue to strive to make *Technology in Action* a learning system that pushes the envelope of what is possible in technology, and what is helpful in teaching. In short: we have worked hard to build a text that fits the way students are learning now.

Our combined almost 50 years of teaching computer concepts have coincided with sweeping innovations in computing technology that have affected every facet of society. From iPads to Web 2.0, computers are more than ever a fixture of our daily lives—and the lives of our students. But although today's students have a much greater comfort level with their digital environment than previous generations, their knowledge of the machines they use every day is still limited.

Part of the student-centered focus of our book has to do with making the material truly engaging to students. From the beginning, we have written *Technology in Action* to focus on what matters most to today's student. Instead of a history lesson on the microchip, we focus on tasks students can accomplish with their computing devices and skills they can apply immediately in the workplace, the classroom, and at home.

We strive to keep the text as current as publishing timelines allow, and we are constantly looking for the next technology trend or gadget. We have augmented the text with weekly technology updates to help you keep your classroom on top of the latest breaking developments and continue to include a number of multimedia components to enrich the classroom and student learning experience. The result is a learning system that sparks student interest by focusing on the material they want to learn (such as how to integrate computing devices into a home network) while teaching the material they need to learn (such as how networks work). The sequence of topics is carefully set up to mirror the typical student learning experience.

As they read through this text, your students will progress through stages of increasing difficulty:

1. Thinking about how technology offers them the power to change their society and their world
2. Examining why it's important to be computer fluent
3. Understanding the basic components of computing devices
4. Connecting to and exploring the Internet
5. Exploring software
6. Learning the operating system and personalizing their computer

7. Evaluating and upgrading computing devices
8. Understanding home networking options and keeping computing devices safe from hackers
9. Going mobile with smartphones, netbooks, tablets, and laptops
10. Going behind the scenes, looking at technology in greater detail

We continue to structure the book in a “spiraling” manner, intentionally introducing on a basic level in the earlier chapters concepts that students traditionally have trouble with and then later expanding on those concepts in more detail when students have become more comfortable with them. Thus, the focus of the early chapters is on practical uses for the computer, with real-world examples to help the students place computing in a familiar context.

For example, we introduce basic hardware components in Chapter 2, and then we go into increasingly greater detail on some hardware components in Chapter 6 and in the “Under the Hood” Technology in Focus feature. The Behind the Scenes chapters venture deeper into the realm of computing through in-depth explanations of how programming, networks, the Internet, and databases work. They are specifically designed to keep more experienced students engaged and to challenge them with interesting research assignments.

Throughout the years we have also developed a comprehensive multimedia program to reinforce the material taught in the text and to support both classroom lectures and distance learning:

- The **Helpdesk training content**, created specifically for *Technology in Action*, enables students to take on the role of a helpdesk operator and work through common questions asked by computer users. These have been updated this edition to reflect the way in which users access help today.
- Exciting **Sound Byte multimedia**—fully updated and integrated with the text—expand student mastery of complex topics.

This book is designed to reach the students of the twenty-first century and prepare them for the role they can take in their own community and the world. It has been an honor to work with you over the past 11 years to present and explain new technologies to students, and to show them the rapidly growing importance of technology in our world.

Visual Walk-Through

Topic Sequence

Concepts are covered in a progressive manner between chapters to mirror the typical student learning experience.

CHAPTER 2

storing data and INFORMATION

Because RAM is volatile storage, it can't be used to store information indefinitely. To save your data and information permanently, you need to save it to a nonvolatile storage device, such as a hard drive, cloud storage location, DVD, or flash drive.

Hard Drives

Are there different kinds of hard drives? The **hard disk drive (HDD)**, or hard drive, is your computer's primary device for permanent storage of software and documents. The hard drive is a nonvolatile storage device. An **internal hard drive** resides within the system unit and usually holds all permanently stored programs and data. Today's internal hard drives (see Figure 2.20) have capacities of as much as 8 TB or more. **External hard drives** offer similar storage capabilities but reside outside the system unit and connect to the computer via a port.

smartphone, laptop, and a tablet, at different times during the day. Inevitably, you'll find you need access to a current version of a file that is stored on a device other than the one you're using. If your devices are connected to the Internet, cloud storage provides a convenient option.

Cloud storage refers to using a service that keeps your files safely on a local device. Using a cloud storage service requires that you install software on your device. A popular web-based application for storing files on the cloud is Dropbox. Dropbox supports computers running Windows, OS X, and Linux as well as many smartphones and tablets. After installing the Dropbox software on your devices, any files you save in the Dropbox folder are accessible to all your other devices via the Internet. You can also share folders in Dropbox with other Dropbox users, making it ideal for group projects.

For example, when you save a history form paper to Dropbox on your laptop, the Dropbox software also copies the paper up onto a computer attached to the web. Now when you grab your smartphone and head off to class, you can access the paper created on your laptop through the Internet connection on your smartphone and make changes to it if necessary.

Dropbox storage capacity is limited to between 2 GB and 8 GB for free accounts. Other cloud storage alternatives include Microsoft OneDrive which provides 1 GB of free space, and Google Cloud and Google Drive, which each offer 5 GB of free storage.

Portable Storage Options

How can I take my files with me without relying on cloud storage? For large portable storage needs, there are portable external hard drives, which are small enough to fit into your pocket and have storage capacities of a TB (or larger). These devices are lightweight and enclosed in a protective case. They attach to your computer via a USB port (see Figure 2.25).

Permanent storage devices are located in your desktop or laptop computer in a space called a **drive bay**. There are two kinds of drive bays:

1. Internal drive bays cannot be seen or accessed from outside the system unit. Generally, internal drive bays are reserved for internal hard drives.
2. External drive bays can be seen and accessed from outside the system unit. External drive bays house CD and DVD drives, for example. On desktop computers, sometimes there are empty external drive bays that can be used to install additional drive bays. These extra spaces are covered by a faceplate on the front panel. Laptop computers generally do not give you the ability to add additional drives. Such expansion is done by attaching an external drive to the computer through a USB port.

FIGURE 2.20 Internal drive bay as a computer's primary nonvolatile storage (Shutterstock.com)

FIGURE 2.25 Small, portable external hard drive enable you to take a significant amount of data and programs on the road with you. (Shutterstock.com)

CHAPTER 6

ACTIVE HELPERS Evaluating Your CPU and RAM

In this Active Helper, you'll play the role of a help-desk staffer. Getting calls about what the CPU does and how to evaluate its performance. You'll also find calls about how memory works and how to evaluate how much memory a computer needs.

SOUND BYTE Installing RAM

It's a good idea to have more than the minimum amount of RAM you need now so you can use more programs in the future. Remember, too, that "higher" means faster and the minimum values recommended by manufacturers; having more RAM often helps programs run more efficiently. New systems today ship with at least 4 GB of RAM, and high-end systems can come with 24 GB. The rule of thumb: When buying a new computer, buy as much RAM as you can afford.

How much RAM do I need? At a minimum, your system needs enough RAM to run the OS. Running the 64-bit version of Windows 8.1 requires a minimum of 2 GB of RAM. However, because you run more applications at one time than just the OS, you'll want to have more RAM than just what's needed for the OS. For example, Figure 6.12 shows how much RAM is recommended for the OS, a web browser, and some software.

FIGURE 6.12 Recommended RAM Allocation

Adding RAM

Is there a limit to how much RAM I can add to my computer? The motherboard is designed with a specific number of slots into which the memory cards fit, and each slot has a limit on the amount of RAM it can hold. To determine your specific system limits, check the system manufacturer's website. In addition, the OS running on your machine imposes its own RAM limit. For example, the maximum amount of RAM for the 32-bit version of Windows 8.1 is 4 GB, whereas the maximum memory you can install using the 64-bit version of Windows 8.1 Pro is 192 GB.

Is it difficult or expensive to add RAM? Adding RAM is fairly easy (see Figure 6.13). Be sure that you purchase a memory module that is compatible with your computer. Also be sure to follow the installation instructions that come with the RAM module. Typically, you simply line up the notches and gently push the memory module in place.

FIGURE 6.13 Adding RAM to a computer is quick and relatively inexpensive. On a laptop, you often gain access through a panel on the bottom. (Shutterstock.com)

Technology Under the Hood

Some people are drawn to understanding things in detail; others are happy just to have things work. If you use a computer, you may not have been prompted to "look under the hood." However, if you can understand the hardware inside a computer, you'll have some real advantages:

- You won't have to pay a technician to fix or upgrade your computer. You'll be able to fine-tune it yourself, and you'll be able to make your investment in your computer last longer.
- You'll be able to evaluate new advances in technology. For example, what's the impact of a new type of memory or a new processor?
- If you're a programmer, you'll be able to write more efficient and faster programs.

And if you're preparing for a career in information technology, understanding computer hardware is critical for you. In this Technology in Focus feature, we'll build on what you've learned about computer hardware in other chapters and go "under the hood" to look at the components of your system unit in more detail. Let's begin by looking at the building blocks of computers: switches.

Switches

How does a computer process the data you input? A computer system can be viewed as an enormous collection of on/off switches. These simple on/off switches are combined in different ways to perform addition and subtraction and to move data on and off the system.

Electrical Switches

To process data into information, computers need to work in a language that is understood. Computers understand only two states of electrical on and off. Inside a computer, these two possibilities are called 1 and 0, as defined using the numbers 1 and 0 in the language represented by those numbers is called **binary language** because just two numbers are used. Every time you click your mouse, such as processing data or printing a report, the computer breaks down into a series of 0s and 1s. **Electrical switches** are the devices inside the computer that are flipped between the two states of 1 and 0, signifying "on" and "off."

Switches

You use various forms of switches every day. The light switch in your kitchen either is "ON," allowing current to flow to the light bulb, or "OFF." Another switch you use each day is

Hardware First Introduced

Chapter 2 is the first time students read about introductory hardware. It's covered at the beginning level because this is students' experience level at this point of the book.

Hardware Taught in More Depth in Additional Chapters

In later chapters, students read about hardware in greater depth because they're more experienced and comfortable working with their computers.

Technology in Focus

Four special features that teach key uses of technology today.

Multimedia Cues

Visual integration of multimedia.

Using Technology to Change the World

How Will You Put Technology in Action?

Technology on the World Stage

OBJECTIVE

1. How can becoming proficient with technology help you understand and participate in important issues in the world at large? (pp. 34-36)

How Will Technology Improve Your Life?

Technology at Home

OBJECTIVES

3. What does it mean to be computer literate? (pp. 44-45)
4. How does being computer literate make you a better consumer user and consumer? (pp. 44-45)

Sound Byte: Questions to Ask Before You Buy a Computer

Technology and Our Society

OBJECTIVE

2. How can knowledge of technology help you influence the direction our society takes? (pp. 38-40)

Technology and Your Career

OBJECTIVE

5. How can becoming computer literate help you in a career? (pp. 46-50)

How Cool Is This?

Highlights the latest and greatest websites, gadgets, and multimedia.

HOW COOL IS THIS?

Want to make a difference with technology? The good news is that it has never been easier. Technology is allowing more versions of us to become systems of change in our communities and in the world. For example, in London, over 20,000 school-age children are joining **Apps for Good**, a program that links students, educators, and local experts to create solutions in developing and existing apps to help solve problems they see around them. In the United States, the **Verizon Innovative App Challenge** offered schools across the United States prize money for student teams to design apps to address the needs of their communities. In Philadelphia, people paid for a week-long civic hacking event called **Random Acts of Kindness**. They created apps to keep track of lobbyists in city government, to map the location of murals in the city, and to help experience people to find out five hybrids about investment. What kind of good can you do with technology? www.verizon.com/innovative-app-challenge

The Digital Divide and the Mobile Bridge

FIGURE 1.5 Can we bridge the digital divide through mobile devices? (Shutterstock)

The digital divide, the gap between those with easy access to technology and those with little to no access (see Figure 1.5), is a problem that leads to complex social issues. For those who lack access to the Internet and computers, it is difficult to develop computer skills, which are very often critical to future success. Less familiarity with the Internet can also lead to a lower level of active, engaged citizenship. So how should we attack the problem of the digital divide in the United States?

Recent studies from the University of Michigan show that without Internet access at home, teens from low-income households (family income under \$20,000 a year) are more likely than their wealthier counterparts to use their cell phones to go online. So the increasing penetration of cell phones might be the answer to ending the digital divide. Or is it? Going online using a cell phone plan is the most expensive of all options, and data transfer spreads are often slow. So teens with the least money are likely paying the most to get the slowest online experience. And they are more likely paying for it themselves, as opposed to teens from wealthier households in which, according to the same University of Michigan study, the teens are more likely to be on family plans paid for by someone else.

In addition, text phone usage is limited to managing online social networks, playing games, or listening to music. Computer skills and skills that could lead to economic advancement, like filling out job applications or running a business, are not yet handled easily on mobile devices. So by not having free Internet access available, is our society placing those groups least able to afford access at an unfair disadvantage?

Will the increasing penetration of smartphones and faster cellular Internet access eliminate the digital divide in the United States? Should our government intervene and make sure there is sufficient free Internet access for all? Is it ethical to deprive the poorer segment of our society of a needed commodity? Answering challenging questions like these is part of being an informed citizen.

Innovations in Printing

With the advent of the computer, many speculate that our world would become a paperless society. Instead of saving printed documents and other output we save them prior to the PC information would be saved in a digital state: hard drives replacing filing cabinets, online photo buckets replacing photo albums and scrapbooks, and e-books replacing our favorite texts. Hard drive capacities do enable us to save more photos and other files to the "cloud". Additionally, e-book readers have increased in popularity. But has this push toward digital content begun to make the printer obsolete? Surprisingly, no. People still have a deep-rooted need to see, feel, smell, share, or use their digital images or information in a physical form. New technologies that push the boundaries of printing, such as printing from the cloud and 3-D printing, are being developed and refined.

Cloud Printing

To print a document from a desktop or laptop computer, you must have a printer associated with your computer. Usually this is not a problem because at home, at school, or in the office, there is generally one printer, and all the PCs connected to it have the software and cables or wireless capabilities needed to use it. But what happens if you want to print something from your smartphone or tablet? Common solutions have been to e-mail the document to yourself or transfer the document to a web-based storage service such as Dropbox so that a printer-connected computer could access it. Another solution is Google Cloud Print, a service that lets you configure your printers so you can access them from mobile devices.

Google Cloud Print uses cloud-ready printers (see Figure 2.45) that are now available from manufacturers such as HP, Kodak, and Epson. These printers connect directly to the Internet and register themselves with Google Cloud Print without needing to be connected to a computer. Once a printer is registered with Cloud Print, printing jobs can be sent to it from mobile devices (such as tablets and smartphones) using the Internet. Conventional printers that you already own can

FIGURE 2.45 Cloud-ready printers only need an Internet connection to be accessed from any mobile device.

DIG DEEPER

Making Reality Even More Real

We're comfortable with carrying around digital data in our pockets. But the advent of wearable computing is now allowing us to integrate digital information directly into our reality, both to add more detail and at times to remove unwanted visual effects. How does this happen?

Augmented reality combines our normal sense of the world around us with an additional layer of digital information. The extra information can be displayed on a separate device, such as an augmented reality app for smartphones. For example, city transit apps overlay images that give you directions to the nearest subway lines on top of your actual view of the street (see Figure 1.16). But having to carry and position a separate device is clunky. Google Glass is a project that augments reality using a "third eye," a separate camera mounted to the side of a lightweight headset (see Figure 1.17). You can record images and videos by simply saying, "Take a picture." When you say "Glass, how long is the Brooklyn Bridge?" Glass communicates verbally with your phone and issues a request to the Internet. The returned information is formatted and then sent to a projector. Instead of the projector you're used to seeing in your classroom, this projector is so small it fits into the armband of the glasses. The output beam

FIGURE 1.17 Google Glass is a real-time video digital information directly from your view of the world. (iStockphoto.com/Jeff Chou)

from the projector bounces off a glass prism that is aligned so that the beam is sent directly to the retina of your eye, as shown in Figure 1.18. (This is why Google Glass is not available for those who wear glasses now. To adjust the prism so that the projector's beam goes through the person's

Hands-on activity found between Parts 1 and 2 of each chapter.

BITS & BYTES

Putting Your Computer to Work . . . While You Sleep

Complex scientific research, such as human genome exploration, requires fast computing power. Software has been developed to the individual computing device (including tablets and smartphones) in a grid to enable them to work together. This effectively creates a cheap supercomputer that many not-for-profit research organizations use to research problems that will benefit the greater good, and your computer can help. Visit the World Community Grid (www.worldcommunitygrid.org) and download the software. Once installed on your device, it allows your computer to work on research during the many times when your CPU is idle (or at least not working to its full potential). Your computing device can participate in exciting research projects on new drugs, sustainable water, and cancer. So tell your computer to get to work!

check your understanding //

For a quick review to see what you've learned so far, answer the following questions. Visit www.pearsonedglobal editions.com/Exam to check your answers.

multiple choice

- Which is NOT a technology that has been used to deliver assistance during times of crisis?
 - Ubihabit
 - social networking
 - GRID codes
 - e-mail
- Eckhardt (eckhardt.com) is a global platform which serves the following purposes:
 - posting business ideas and acquiring funds for them
 - healthcare diagnostic technology
 - music composer
 - Geographical Information Systems (GIS)
- Collaborative consumption is when people get together to:
 - find the best prices on products
 - exchange services on services and goods they have purchased
 - fight diseases of the respiratory tract
 - increase the use of a single product by sharing access to it
- Web 2.0 is:
 - a program that makes access to the Internet easier as fast
 - functionality that enables everyone to contribute to the web
 - a tool to produce YouTube videos
 - an international version of Internet protocols
- An example of the use of technology in advancing human rights relations is:
 - Phi@Home (phihome.org)
 - The Windows Project (windows.org)
 - World Food Programme (wfp.org)
 - Jurkyard Junction (jurkyard.media.mit.edu)

true-false

- The move toward access versus ownership is a sign of collaborative consumption.
- Technologies like scientific visualization tools, bioimaging chips and computationally intense modeling software help develop biomedical weapons.

critical thinking

- What Occupies Your Mind?**
What we think about is influenced by the information fed to our mind all day long. Web 2.0 has created numerous channels for people to offer their own work for free—open source software, free music, books and artwork. How has this affected your thinking? Have you created things to share freely with the online world? Has it changed the value you put on music, books, and art?
- Ubihabit Means "Witness"**
We saw that the Ubihabit software has been used for a wide range of applications. What kind of events in your world would benefit from this mapping software? Think of a few ways that having real-time collection and mapping of information would make the world at your school, safer in your town, or just more fun.

What's Inside My Computer?

Understanding what capabilities your current computer has is one of the first steps toward computer literacy. In this exercise, you'll learn how to explore the components of your Windows computer.

Step 1

To gather information about the storage devices on your computer, on the Start screen, click **File Explorer** (previously called Windows Explorer) to switch to the Desktop and display File Explorer. In the navigation pane, click **Computer** to display information about your computer's drives.

Step 2

The File Explorer Computer screen displays information about internal storage devices (such as internal hard drives), optical storage devices (such as DVD drives), and portable storage devices (such as flash drives and external hard drives). The total amount of usable storage space, as well as the amount of space actually free (unused), on the drives is shown.

Step 3

To display the System screen, click the **System** icon on the Computer tab on the File Explorer ribbon. Ribbon, and then click the **Properties** button.

- Step 4** You can gather quite a bit of information from the System screen, such as:
- Version of Windows
 - Type of processor
 - Speed of the processor
 - Amount of RAM installed
 - System type (32-bit or 64-bit)
